Experience

- May 2022 – Present 📍 Remote, Turkey
 Full Stack Software Engineer
Valentura Technology & Investment

During the time I worked at this company, I took part in many mobile, web and blockchain projects. I mentored and recruited friends who started as interns in the company and worked with them on many projects. I played a big role in the profitability of the company by making important development decisions about the projects.

- July 2023 – Aug 2023 📍 Ankara, Turkey
 Intern (Network & SAP)
Tubitak Uzay

I worked on network, system and SAP software at Tubitak Space. It was an internship where I understood the importance of in-house security and software security.

- June 2022 – July 2022 📍 Ankara, Turkey
 Intern (UI Developer)
Jotform

In my one-month internship, I teamed up with a skilled developer to create an NPS Tool web app in the Growth Tools Interns team. I focused on the project's dashboard and also presented it to the company's growth team and managers. Working with projects in a mono-repo gave me insights into various projects and taught me how to contribute to a high-quality project within a big team.

- Jan 2022 – April 2022 📍 Remote, Turkey
 Software Developer(full-time)
Open Money

Due to my interest in the blockchain field, I worked as a software developer at one of the few companies doing this job in Turkey. As a result of the short time I have been working, I have developed the mobile application of 2 projects.

- Nov 2020 – Jan 2021 📍 Remote, Turkey
 Frontend Developer(Intern)
Gais Security

I sought a volunteer opportunity during the pandemic and landed a position at a firm. In just 3 months, I delved into React and Vue technologies, actively contributing to the company's products. Excitingly, the parts I worked on were published in the production environment for the first time.
